

# Project Predict

Market Validation Statistics, Source Verification & Structural Problem Matrix

## 1. THE "BIG NUMBER" STATISTICS & SOURCE VERIFICATION

Use these validated data points and reference links for background verification and slide screenshot capture.

### 1. The Time Sink (Operational Overhead)

#### 15–20 Hours Wasted / Week

Brands spend an average of 15–20 hours per week just finding, vetting, and managing individual creators manually.

**Source Section:** "Time Spent on Influencer Campaigns" — Influencer Marketing Hub - 2024 Benchmark Report

### 2. The ROI Failure Rate (Targeting Mismatch)

#### 60% of Marketers Struggle

60% of marketers report that finding influencers with the exact right target audience remains their primary structural hurdle, leading directly to inefficient allocation and wasted budget.

**Source Chart:** "Biggest Challenges" — Linqia - The State of Influencer Marketing

### 3. The Market Size (Macro Catalyst)

#### \$250 Billion Current TAM → \$480 Billion by 2027

The global Creator Economy represents a \$250 Billion market ecosystem today, systematically projected to expand to \$480 Billion by 2027.

**Source Headline/Chart:** Goldman Sachs - The Creator Economy Could Approach Half a Trillion Dollars by 2027

### 4. The Local Wedge (Unlocking SMBs)

#### 72% Consumer Decision Reliance

72% of consumers actively utilize Instagram or TikTok to drive localized restaurant and dining decisions. Despite this demand, hyper-local businesses completely lack automated infrastructure to harness it.

## 2. THE REAL-WORLD PAIN MATRIX

A strategic breakdown contrasting current marketplace structural vulnerabilities with Project Predict's proprietary AI solutions.

| The Structural Problem              | The Real-World Complaint (Customer Friction)                                                                                                        | Our AI Solution (Project Predict)                                                                                                                                                                |
|-------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>The "Cattle Call" Problem</b>    | "I posted a job on a UGC platform and got 200 applications. 190 of them were terrible. I spent 4 hours just deleting bad pitches."                  | <b>Zero Applications.</b><br>Our AI instantly curates, scores, and delivers only the top 3 guaranteed matches. No filtration or sorting required.                                                |
| <b>The "Fake Vibe" Problem</b>      | "I hired a food influencer with 50k followers. They showed up, the video looked cheap, and it didn't match our luxury restaurant aesthetic at all." | <b>Aesthetic Matching.</b><br>Qwen/AI algorithms analyze the exact visual style, pacing, and grading of both the brand and the creator's historical output to guarantee absolute vibe alignment. |
| <b>Ghosting &amp; Unreliability</b> | "I gave a creator \$100 worth of free food, and they completely ghosted me. Never posted the video."                                                | <b>Trust &amp; Safety Layer.</b><br>Creators are continually evaluated and ranked via a dynamic reliability score. Bad actors and low-fulfillment nodes are algorithmically expunged.            |
| <b>The ROI Guesswork</b>            | "I pay \$150 per video, but I have no idea if this person's audience actually lives in my city or cares about my product."                          | <b>Predictive ROI.</b><br>Calculates precise multi-axis compatibility vectors based on core localized demographics, forecasting success probabilities before capital deployment.                 |

### 3. MARKET NUMBERS & ECONOMIC IMPACT

Quantifying the fiscal drag of current operational practices and the addressable commercial opportunity.

| The Metric               | The Hard Number        | What It Means for Project Predict                                                                                                                                                        |
|--------------------------|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Time Wasted on Discovery | 15–20 Hours / Week     | Businesses are bleeding critical operational hours. Project Predict compresses a high-friction 15-hour manual process down to a seamless 15-second AI API call.                          |
| Campaign Failure Rate    | 60% of Campaigns       | More than half of typical allocations fail due to poor matching. Our predictive matchmaking framework directly solves this, protecting margins.                                          |
| SMB Marketing Spend      | \$4,000 / Month (Avg.) | Local businesses possess dedicated budget allocations for growth. They want to invest heavily in modern creator channels but lack the risk-mitigation tools to execute securely.         |
| Total Addressable Market | \$250 Billion          | The creator ecosystem is growing rapidly, yet the underlying matchmaking infrastructure remains archaic (relying on manual DMs and outdated directories). We own the intelligence layer. |
